

Animal Welfare – Sourcing Glidepath

Food sustainability encompasses the entire food supply chain, from farmers and growers to processors and manufacturers, distributors, retailers and consumers, and the transportation that links the chain together. At Carnival Corporation & plc, we work with our global supply chain to help meet our animal welfare goals for the food we serve onboard our ships.

The following summarizes our incremental targets to help meet our goals for our majority-owned brands. We continue to work with our vendors to help meet our goals. In the event the supply needed to help meet our goals is not available, we will continue to engage with our vendors to understand their plans to offer these products, and also work diligently to identify new vendors that provide these products. In instances where supply is insufficient or other supply chain uncertainties or constraints impact our ability to meet these goals by 2025, we will share this information accordingly and modify our goals as necessary.

Focus Area	Goal	Timeline			
		2022	2023	2024	2025
Eggs	100% cage-free eggs ¹ by end of 2025	20%	40%	70%	100%
Chicken	100% responsible chicken sourcing ² by end of 2025	15%	30%	60%	100%
Pork	100% gestation crate-free pork ³ by end of 2025	15%	30%	70%	100%

Notes:

- ¹ Cage-free eggs refer to hens that are not kept in battery cages.
- ² Responsible sourcing of chicken refers to chicken raised and processed under appropriate animal welfare practices and standards. Chicken procured in the United States will be sourced from suppliers aligned to the Global Animal Partnership (GAP) certification or the Better Chicken Commitment. For chicken sourced in other geographical locations, we will procure from sources that support animal welfare practices.
- ³ Gestation crate-free pork refers to farming practices where sows are held in group housing, and where gestation crates are not used for the majority of the gestation cycle.

The goals and targets described in this update are aspirational and forward-looking. As such, results may vary significantly and no guarantees are made that the goals and targets will be met. Actual progress will be disclosed annually until the goals are met, beginning in 2023.
